

Stick Fight Game Instructions

This game mainly has the same game schema with the Stick Fight game as below.

It is best played by two players on one computer, representing the players on the left and right on the screen. Players are only allowed to shoot after they collide with the little yellow icon appearing on the screen. When one player is able to shoot, it can shoot both the other player, and the coins so that the other player cannot collide with them and start to shoot. Player would get one point out if it is knocked out of the screen. One player wins if the other player's score is zero out and thus the game would terminate at this point. Meanwhile, here I initialized the scores to be 5 on both sides.

For the left player, it is able to move up down left right with keyboard w s a d, rotate with keyboard r and t, and fire with the space key. For the right player, it is able to move with the up down left right arrow, rotate with the o p keys, and fire with the return key. Also, both players can press the escape button to play again.

P.S. To see your score and the health bar, please set the aspect ratio into full HD.
